

PRODUCT DESCRIPTION

HASLE GUN20SC

HASLE GUN20SC is a low cement Gunning castable based on Chamotte and Silicon Carbide. Based on the proven and successful GUN39A this product from HASLE is well suited for GUNNING application where alkali resistance is required in combination with the added thermal stability and resistance to slag build-up provided from Silicon Carbide.

Enhanced Particle Size Distribution and formulation makes it possible to achieve extremely low (<10%) rebound during installation.

Applications

For fast and effective installation in aggressive high alkali processes. The Silicon Carbide content improves the products resistance to thermal shock and can form a protective Silicon Oxide coating in oxidizing process environments thus adding to the resistance to slag build up and chemical attacks.
