

PRODUCT DESCRIPTION

HASLE D1700A

HASLE D1700A is a fine grained and strong low cement castable based on high quality Andalusite. Stable at high temperatures while maintaining a good combination of alkali-, thermal shock and abrasion resistance. HASLE D1700A require vibration during installation, but the grain size distribution is suitable for thinner linings and complicated sections.

Applications

HASLE D1700A is used successfully in ladles and tundishes in the steel- and foundry industries. HASLE have supplied to one danish foundry continuously for more than 15 years.
