

## Sweden's biggest Cement Plant shows great result with HASLE pre-cast Modular Lining

One of Heidelberg Cement's two cement plants in Sweden, Cementa Slite AB, has just completed a test of HASLE's precast Modular Lining. With a production capacity of 2.5 million tons per year, Cementa Slite AB is Sweden's largest cement factory. It operates on 80-85% RDF (Line 8).

In March 2019, Cementa Slite AB, installed a 10 m<sup>2</sup> trial of HASLE Modular lining in the cooler area, just under the rotary kiln (the hottest area in the cooler). To be successful, the test of the Modular Lining had to achieve a life of min. two years and the steel rails had to be in a condition where they

could be re-used. The installation was carried out by the Swedish installation company, Megamet AB.

During an inspection in October 2020, the Modular Lining was still in great condition. After a year and seven months, the Modular Lining showed no signs of alkali attack, abrasion or coating. In fact, Cementa's Production Engineer, Karl-Erik Gestrinius, describes it as being "still just like new".
