

## Cement Plant achieves +4 years lifetime in Lowest stage pre-cast Cyclone Bull Nose

A cement plant in Thailand has achieved an outstanding long lifetime of 4 years on their Cyclone Bull Nose by switching to HASLE's precast Modular Lining. The Thai cement plant runs on coal with AF fuel (15%) and produces 5500TPD.

In the past, the cement plant had only achieved a lining lifetime of 1 year in their Cyclone Bull Nose. Needing a long-lasting solution with fewer shutdowns, they decided to switch to HASLE's precast Modular Lining. A team of HASLE supervisors provided technical support and supervision as the HASLE precast Modular Lining was installed. Now, with HASLE's precast Modular Lining installed, the Thai cement plant has achieved an outstanding lining lifetime of 4 years.

Using HASLE's precast Modular Lining is a long-lasting solution. The precast elements are all manufactured, pre-fired and made ready to install on site at our state-of-the-art plant in Denmark.

Are you having problems with coating or lifetime of the lining in the high temperature areas of your cement plant, call +45 5695 1800 to learn how to get a free trial for your cement plant.
